

Region 1 EMT Standing Medical Orders
Study Guide 2020

What are the moderate anaphylactic reaction medication guidelines for EMTs?

What are the risks of administering epinephrine on an acute bronchospasm patient?

What are the causes of low EtCO₂?

What are the EtCO₂ waveforms and what do they mean?

When should you consider applying CPAP?

What areas of the body are contraindicated for wound packing?

What medications are approved for excited delirium for EMTs?

What are the contraindications for MAD device?

What medications can the EMT administer for chest pain?

Can a patient refuse transport to the hospital after Narcan has been administered?

What is considered positive Pediatric Sepsis criteria?

What are the signs of decompensated hypovolemic shock?

Describe the GFAST scale for stroke assessment?

Can a narcotic dependent patient go into withdrawal after Narcan use?

What is the name of the Over the Counter (OTC) medication an EMT can administer for an allergic reaction?

What are the adverse effects of Diphenhydramine?

What are the criteria for oral glucose administration?

Can nitroglycerin be administered to a pediatric patient?

What are the indications and contraindications of Epi Auto-Injector administration?

How much fluid should a pediatric patient receive if sepsis is suspected?

Routes of administration for EMT medications:

Albuterol

Epi Auto-injector

Naloxone

Nitroglycerin

Aspirin

Glucagon

What are the indications for use for the following medications?

Albuterol _____

Aspirin _____

Epi Auto-Injector _____

Duo-neb (Albuterol/Ipratropium) _____

Glucagon _____

Naloxone (Narcan) _____

Nitroglycerin _____

Oral Glucose _____
